

eXport

“Before” you even lay the first cable, you’re already using Softing’s WireXpert project management tool.

You open up WireXpert’s eXport software.

Go to Tools.

Select **Label List Generator**, and type in your project specifics.

In this case, we’ll use West Towne Mall as the site name, we will only be working on the 1st floor, and in this case, there are 5 telecom rooms, 5 racks, 5 panels, and 4 ports.

You type this into the project management software in just a few clicks, and the label list generator creates a list of 500 cables for you.

Now there are two things you can do with this list of cables.

- 1) Create cable labels to affix to your cables.
- 2) Import the list of 500 cables to your WireXpert where this list of cables will be selectable when you start certifying cables.

First, the eXport project management software helps you make a ton of cable labels very quickly.

Once these cable labels are defined, use the eXport project management software to dump the list of 500 cables **to a csv file** so they can be imported into the label making tool you’re already using, or of your choosing.

Now you are ready to affix the labels to your cables and install your cables.
